

LITTLE LAB COATS • PRINTABLE STEM GUIDE

5 STEM Activities for Kindergarten

Five playful, parent-friendly activities that feel fun first and educational second.

How to use this: Pick one activity, gather simple supplies, and keep it light. The goal is to entertain your child, spark curiosity, and sneak in great observation and language practice along the way.

1. Toy Car Ramp Race

NEED: BOOKS, CARDBOARD, TOY CAR

Try it: Stack books under cardboard to make one low ramp and one steep ramp. Race the same car down both.

- Ask which ramp was faster.
- Ask which one went farther.
- Try changing the height and racing again.

2. Sink-or-Float Treasure Tub

NEED: BOWL OF WATER, TOWEL, HOUSEHOLD OBJECTS

Try it: Gather a few safe items like a spoon, cork, leaf, block, coin, or pom-pom. Guess first, then test.

- Let your child sort items into sink and float.
- Talk about which ones were surprising.
- Repeat with new objects another day.

3. Magnet Treasure Hunt

NEED: MAGNET, BASKET OF SAFE OBJECTS

Try it: Search for things the magnet can pick up. Make a yes pile and a no pile.

- Test keys, paper clips, foil, fabric, toy cars, and spoons.
- Ask what the “yes” items have in common.

4. Leaf Detective Walk

NEED: OUTDOOR SPACE, LEAVES, MAGNIFYING GLASS IF YOU HAVE ONE

Try it: Collect a few leaves and compare size, shape, color, and texture.

- Line them up from smallest to biggest.
- Notice smooth edges vs. jagged edges.
- Let your child choose a favorite and explain why.

5. Paper Bridge Teddy Rescue

NEED: PAPER, TWO CUPS, PENNIES OR A TINY TOY

Try it: Put the cups apart and lay a sheet of paper across them. Test how many pennies it can hold. Then fold or roll the paper and test again.

- Turn it into a challenge: can the bridge rescue the teddy?
- Talk about which shape was strongest.
- Try rebuilding if it collapses.
