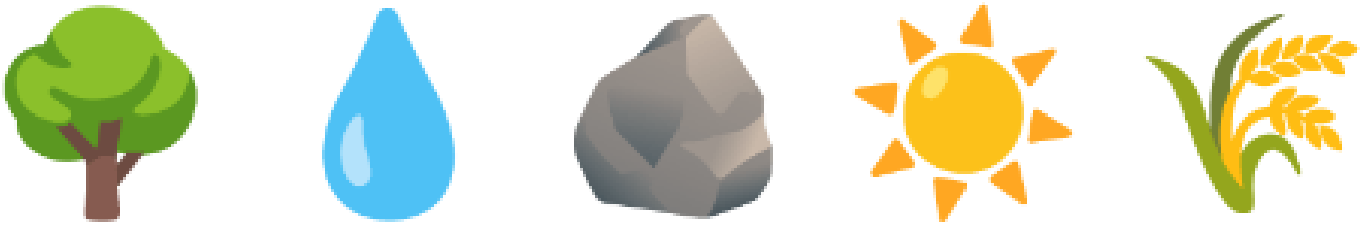
🌿 What Does Earth Give Us? 🌿

Earth Science — Earth & Human Activity | Unit 2, Lesson 1

📚 **Grade:** Kindergarten ⏱️ **Duration:** 30–45 minutes 🌍 **Subject:** Earth Science — Earth & Human Activity 🧰 **Kit Lesson:** No



Earth gives us everything we need — can you spot what's natural and what's human-made?

📋 **NGSS Standard:**
K-ESS3-1 — Use a model to represent the relationship between the needs of different plants or animals (including humans) and the places they live.

🎯 Learning Objective

Students will investigate what Does Earth Give Us?, make observations during the lesson activity, and explain what they learned using evidence from the lesson.

🎯 The Big Idea

Everything we use comes from Earth! Trees give us wood. Soil grows our food. Water keeps us alive. Even plastic — which looks totally human-made — started as oil deep underground. In this lesson, students explore the difference between **natural resources** (things Earth makes) and **human-made items** (things people create), and discover almost everything traces back to something natural.

💧 Water — Earth's Most Important Resource 💧

Earth Science — Earth & Human Activity | Unit 2, Lesson 2

📚 **Grade:** Kindergarten ⏱️ **Duration:** 30–45 minutes 🌍 **Subject:** Earth Science — Earth & Human Activity 🧰 **Kit Lesson:** No

Earth is 71% water — but almost none of it is available for us to drink!

📋 **NGSS Standards:**
K-ESS3-1 — Use a model to represent the relationship between the needs of different plants or animals (including humans) and the places they live.
K-ESS3-3 — Communicate solutions that will reduce the impact of humans on the land, water, air, and/or other living things in the local environment.

🎯 Learning Objective

Students will investigate water — Earth's Most Important Resource, make observations during the lesson activity, and explain what they learned using evidence from the lesson.

🎯 The Big Idea

Water is everywhere on Earth — but most of it is saltwater in oceans that living things can't drink! Only a tiny sliver of Earth's water is fresh, drinkable water. That's why we need to use water carefully and not waste it.

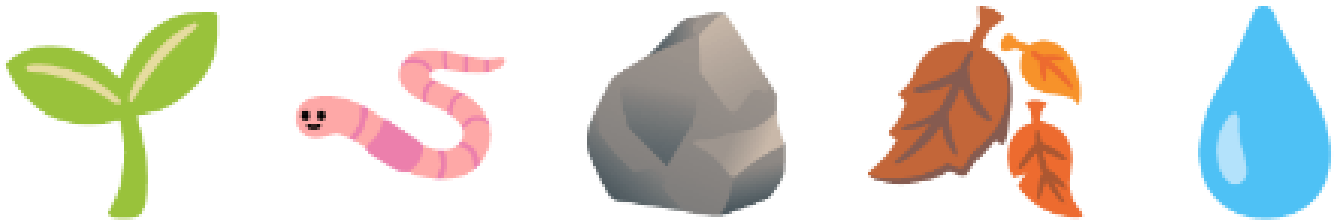
🪱 Soil — What's Under Our Feet? 🪱

Earth Science — Earth & Human Activity | Unit 2, Lesson 3

📚 **Grade:** Kindergarten ⏱️ **Duration:** 30–45 minutes 🌍 **Subject:** Earth Science — Earth & Human Activity 🧰 **Kit Lesson:** No



Healthy soil is alive — it's full of rocks, minerals, organic matter, water, air, and living creatures!

📋 **NGSS Standard:**
K-ESS3-1 — Use a model to represent the relationship between the needs of different plants or animals (including humans) and the places they live.

🎯 Learning Objective

Students will investigate soil — What's Under Our Feet?, make observations during the lesson activity, and explain what they learned using evidence from the lesson.

🎯 The Big Idea

Soil isn't just dirt — it's one of Earth's most important natural resources! Healthy soil is full of tiny rock particles, organic matter (dead leaves and animals that have broken down), water, air, and living things like worms, bacteria, and fungi. Without good soil, plants can't grow — and without plants, animals (including us!) can't eat. Soil is the foundation of life on land.

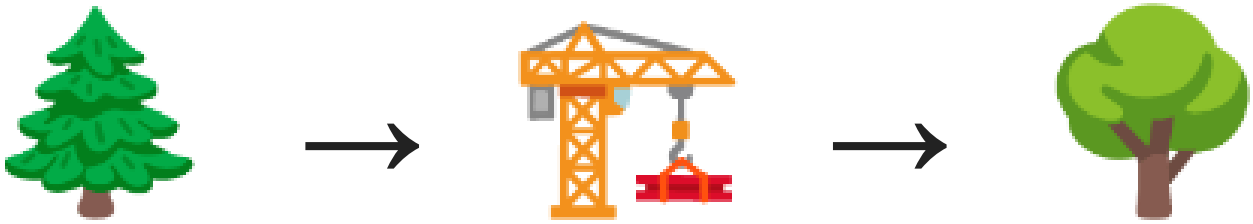
🌍 Humans Change the Earth 🌍

Earth Science — Earth & Human Activity | Unit 2, Lesson 4

📚 **Grade:** Kindergarten ⏱️ **Duration:** 30–45 minutes 🌍 **Subject:** Earth Science — Earth & Human Activity 🧰 **Kit Lesson:** No



Humans can tear down forests — but we can also plant new trees. Our choices matter!

📋 **NGSS Standard:**
K-ESS3-3 — Communicate solutions that will reduce the impact of humans on the land, water, air, and/or other living things in the local environment.

🎯 Learning Objective

Students will investigate humans Change the Earth, make observations during the lesson activity, and explain what they learned using evidence from the lesson.

🎯 The Big Idea

Humans are incredibly powerful. We can cut down forests, drain swamps, dam rivers, and build cities where meadows once were. But we also have the intelligence and tools to fix problems — to plant trees, clean rivers, protect habitats, and restore what we damaged. Every human choice about land, water, and resources has a consequence. The good news: we can make better choices!

🌩️ Weather Hazards — Staying Safe 🌩️

Earth Science — Earth & Human Activity | Unit 2, Lesson 5

📚 **Grade:** Kindergarten ⏱️ **Duration:** 30–45 minutes 🌍 **Subject:** Earth Science — Earth & Human Activity 🧰 **Kit Lesson:** No

Dangerous weather is powerful — but when we know what to do, we can stay safe!

📋 **NGSS Standard:**
K-ESS3-2 — Ask questions to obtain information about the purpose of weather forecasting to prepare for, and respond to, severe weather.

🎯 Learning Objective

Students will investigate weather Hazards — Staying Safe, make observations during the lesson activity, and explain what they learned using evidence from the lesson.

🎯 The Big Idea

Some weather can be dangerous — very strong storms, floods, blizzards, and lightning can hurt people. But when we **know what's coming** and **know what to do**, we can protect ourselves and our families. Meteorologists (weather scientists) use satellites and radar to warn us early. That warning time is the difference between being safe and being caught outside in danger.

🌱 Being Earth's Helper 🌱

Earth Science — Earth & Human Activity | Unit 2, Lesson 6 of 6

📚 **Grade:** Kindergarten ⏱️ **Duration:** 30–45 minutes 🌍 **Subject:** Earth Science — Earth & Human Activity 🧰 **Kit Lesson:** No

🌍 💚 🌱 ✨

Every small action adds up — and Earth needs helpers like you!

📋 **NGSS Standard:**
K-ESS3-3 — Communicate solutions that will reduce the impact of humans on the land, water, air, and/or other living things in the local environment.

🎯 Learning Objective

Students will explore how to help as being Earth's Helper, identify useful actions, and explain why those actions matter.

🎯 The Big Idea

We've learned a lot this unit — natural resources, water conservation, soil, how humans change the Earth, and weather safety. Now it's time to put it all together and **take action**! Even a kindergartner can make real choices that help the environment. The key is being *specific*: not "save the environment" (too vague) but "I will turn off the tap while brushing my teeth, saving 8 gallons per day" (specific and measurable!).
